the game its self you can tell it makes fun of rpg's in general, you cant level up by grinding your main character like most games wich is fun little change from the norm that i like but there is some grinding to be done for the multitude of other characters. there is a clear differents between the stock sprites and the added sprites that turns me off a bit but its not a big deal. one thing that i like about it is that with the amount of characters you can summon over time it gives you the chance to build your party the way you want. the biggest complaint i got is the game does crash some times and if you did not save frequently as did not wen i first started (lost a good 2h worth of grinding the fist time) it can suck for you overall the game was not bad the story was a little amusing and i liked that it tried something a little diferent with the main character i wish they could fix the crashing thought 5/10.. A very good and amusing game for the cheap price! it have a lot of thought out function. stuff to do in the game is also alot.. A game I have sank more time into than I like to admit. Great time waster. Solid repetative gameplace for when you want to veg, but if you don't pay attention too much, you can easily get dead.. This is an highly amusing game. The hero starts starts at level 1,000,000. and everyone is afraid of him. that is untill he gets knocked down to level 1, and can't defeat even the weakest enemies. Now he has to recruit help to get his stats back up so he can defeat the Demon Lord. After which he can get his level back to where it was. The range of allies you can "Summon" is varied, and each girl has her own story. A MUST play.. Very good game. Well worth the asking price.. Fast-paced and addictive dungeon-diving fun, but grindy-in-a-good way -- lots of progression if you want to sink your time in it. The game is a typical JRPG, with a minor social/dating aspect talking to your party members. Its strengths are definitely in its variety (you can experiment with over 35 characters to take on several dungeons) and amount of content (as you progress further, more functions get unlocked). You can play this as complex or as a simply as you like -- either a strong main party that absolutely wrecks dungeons to speed through content, or a rotating party to eventually achieve 100% completion. I'm playing a mix of these styles, as I use a main party whenever I want more gold to skill up my other party members whenever I want to backtrack and hunt down more Bounty bosses. One nice function is that the main character, despite being locked at level one, still gets EXP which can be then given to other party members, allowing you to power level new characters. This, combined with the gift system letting you buy affection, means that it's completely possible to play with just a main party. One thing I hate about poorly-made RPGMaker games is that they take forever to progress through the text and combat. In Hero and Daughter, you can hold down the main action button to absolutely fly through combat. An auto combat button is also added, with the ability to modify your characters' AI to avoid wasting abilities when they don't need to, but so far it's faster just holding down action and spamming the default attack. The story itself is generic outside of the level one gimmick, and the characters know it -- it's just a silly, funny romp. Overall, this is one of the most user-friendly and plain fun games I've played. I found out about it from the DegiGames newsletter as an award-winning game, so I knew it would be good. I picked it up because the concept seemed interesting, but I've been continuing to play it because it's just that fun. Note that I too have experienced the RGSS3 crash error -- hopefully this is not a common bug, and I think that it was caused because I kept having this game open while doing other things.. Fun game with a persistent crashing issue that the developer hasn't been able to figure out.. Finally. A light-hearted RPG Maker game of some quality. The girls' character designs are all great, the dialogue is short and to the point, the story is goofy but not tedious. There are lots of unlockables and a constant flow of treasures and abilities to unlock from each of the girls who resemble a variety of typical classes like Fighter or Mage. It's the frivolous, high-paced Dragon Quest knockoff you've been waiting for. Recommended to fans of Half-Minute Hero or Azure Dreams. The only caveat: this game is anti-grind, like Half-Minute Hero. You do a lot of running at high speeds and slaughtering parties of enemies at high speeds. The game makes fairly thin pretense at gameplay. That's why the steady stream of party member discoveries and unlockables is good, for feeding the frenzy. You're basically bingeing on cute unlockables.. A party of demon lord, a ghost, and yandere assassin ? I think u will never find it anywhere except this game :v. My only thought when i i start play this game is.

Live3D Live3D V3.3.5 Release Note : 1. Added some parameters adjustment of post-processing of light and shadow. 2. Users need to re-register for system upgrading. 3. Added thousand sakura dance template. 4. Added 26 new assets. 5. Start charging..
